

Philips Pronto presents new touch screen control panel TSU9300

March 3, 2009 – With the IF design award winning Pronto TSU9300, Philips presents its new addition to the Pronto family of control panels. This control panel features a high-resolution flush-mounted 2.8" QVGA (320x240) color touch screen. The screen allows easy readability and thanks to the ergonomic design, the control panel can be handled with only one hand. With its bright touch screen, white back-lit buttons and stylish design, the Pronto TSU9300 is a perfect fit for any advanced home system. It is available as from May 2009.

Philips Pronto offers a range of control solutions for the home automation market. Known for their stylish designs, easy handling and advanced technology, Pronto control panels are distributed worldwide typically for residential and commercial applications. With the new addition to the Pronto family of remote panels, the Pronto range now offers a control solution for every need and every demand.

The new TSU9300

The WiFi-based TSU9300 can control your audio-video equipment as well as lights and shades via the Lutron RadioRA system. With its out-of-the-box integration with Escient FireBall audio servers, the Imerge SoundServer S3000 and other XIVA supported music servers (Elan, SpeakerCraft, Xantech, Niles and Revox) and Windows Media Center Edition computers, this multi-functional panel offers a simple solution to manage even the largest digital music, DVD and CD collections. Consumers can make use of a full on-screen user interface, displayed on the clear 2.8" QVGA screen, and scrolling wheel to control their music library.

TSU9300 complements Pronto product range

Philips recently launched the Philips Pronto TSU9800 control panel, which offers a large 6.4-inch VGA color screen, premium docking station with ambient lighting, and the possibility to mount on a table or fix on a wall. The high resolution display provides exceptional readability and a control panel designed for maximum comfort, efficiency and ease of use. The same conveniences the similar model TSU9600 offered. This award winning model still impresses many since its launch in 1996. The TSU9400 is a smaller, longer version, ideal for handheld control.

To support total home control, multi-room wireless and wired remote control installations, the TSU9300, TSU9400, TSU9600 and TSU9800 all integrate seamlessly with the two optional extenders: The wireless RFX9400 and the 19" rack mountable RFX9600.

Philips Pronto continues its challenging goal by extending the boundaries of control and this has resulted in partnerships with more than 40 leading custom installation brands, providing unique and richer user interfaces for content and simplified full home control to consumers.
